AB The wallboard is prepd. from **cement** 45-55, expanded material 10-15, **fly ash** 30-35, **gypsum** 4-7, **water** 40-55 wt.%, and glass fiber. The manuf. process comprises: mixing **cement** with **gypsum** and **fly ash**, adding expanded material under stirring, mixing with **water** to obtain a micro-foamed **slurry** (450-560 kg/m3), pouring the **slurry** into a mold, laying a layer of glass fiber, putting a mold core into the mold, adding **slurry** to 2/3 designed thickness, laying another layer of glass fiber, adding **slurry** to designed thickness, settling for 1-1.5 h, removing the mold core, de-molding after 4 h, and curing. Preferably, the expanded material is expanded vermiculite or perlite;.

ST light wt hollow wallboard strength prodn cost; **cement** light wt hollow wallboard; expanded vermiculite light wt hollow wallboard; expanded perlite light wt hollow wallboard; **fly ash** **gypsum** glass fiber wallboard; **gypsum** **fly ash** glass fiber wallboard; glass fiber **fly ash** **gypsum** wallboard

IT Perlite
